

Linear Unit MTJ 65

The MTJ linear units have toothed belt drive and compact dimensions to provide high performance features such as high speed and good accuracy.

The unit MTJ have a pre-tensioned steel reinforced AT polyurethane timing toothed belt. In conjunction with a zero-backlash drive pulley high moments with alternating loads with good positioning accuracy, low wear and low noise can be realized.

All parts in the profile are protected from dust and other contaminations. As corrosion-resistant protection strip is available as option.

Modulus of Elasticity: $E = 70000 \text{ N / mm}^2$

Operating Temperature (°C): 0 ~ +60 For operating temperature out of the presented range, please contact Rollco.

Duty Cycle: 100%

Max. Acceleration (m/s²): 50 (Optional, acceleration up to 70 m/s² possible if used without INOX seal strip)

Max. Travel Speed (m/s): 1.5 (Optional, travel speed up to 6 m/s possible if used without INOX seal strip)

1. Drive block with pulley
2. Corrosion-resistant protection strip (available also without protection strip)
3. AT polyurethane toothed belt with steel tension cords
4. Carriage with built in magnets
5. Aluminium profile-hard anodized
6. Linear ball guideway
7. Central lubrication port, both sides
8. Tension end with integrated belt tensioning system

Deflection of the linear unit

Fixed - fixed mounting

Fixed - free mounting

δ Maximum deflection of the linear unit [mm]
 δ_{max} Maximum permissible deflection of the linear unit [mm]
 F Applied force [N]
 L_p Unsupported profile length [mm]

The maximum permissible deflection δ_{max} must not be exceeded. In the case that maximum deflection δ exceeds the maximum permissible deflection δ_{max} additional profile supports are needed.

Deflection of the linear unit

MTJ 65

① The linear units do not include any safety stroke.
 Absolute stroke = Effective stroke + 2 x safety stroke.

① Journal with or without keyway ① All dimensions in mm. Drawings scales are not equal.

① The linear units do not include any safety stroke.
 Absolute stroke = Effective stroke + 2 x safety stroke.

① Journal with or without keyway ① All dimensions in mm. Drawings scales are not equal.

① The linear units do not include any safety stroke.
 Absolute stroke = Effective stroke + 2 x safety stroke.

① Short carriage only for MTJ series.

① Journal with or without keyway ① All dimensions in mm. Drawings scales are not equal.

TYPE 2

Defining of the linear unit length

$$L = \text{Effective stroke} + 2 \times \text{Safety stroke} + L_v + 40 \text{ mm}$$

$$L_v - \text{Long carriage} = 190 \text{ mm}$$

$$L_{\text{total}} = L + 185 \text{ mm}$$

$$L_v - \text{Short carriage} = 140 \text{ mm}$$

Left side (L)

Right side (R)

Double-Carriage

$$L = \text{Effective stroke} + 2 \times \text{Safety stroke} + L_v + A + 40 \text{ mm}$$

$$L_{\text{total}} = L + 185 \text{ mm}$$

$$A \geq L_v + 30 \text{ mm}$$

General data

For lengths/stroke over the stated value in the table, please contact Rollco. Values for max. stroke are not valid for double carriage (equation of defining the linear unit length for particular size of the linear unit needs to be used).

For minimum stroke below the stated value in the table, please contact Rollco.

Recommended values of loads

All the data of static and dynamic moments and load capacities stated in the table are theoretical without considering any safety factor. The safety factor depends on the application and its requested safety. We recommend a minimum safety factor ($f_s = 5.0$).

Modulus of elasticity

$E = 70000 \text{ N / mm}^2$

General data double carriage

A - Distance between carriages.

Max. travel speed and max. acceleration of linear unit with the corrosion-resistant protection strip is 1,5 m/s and 50 m/s² respectively.

The stated values are for strokes up to 500 mm. No load torque value increases with stroke elongation.

Max. acceleration (m/s²): 70

For acceleration over the stated value, please contact Rollco.
